SUMMARY

UX / Interaction designer with 5.8 years of experience turning complex, multi-step workflows into intuitive experiences for enterprise B2B users, the same systems-level thinking SMBs need when navigating Google Ads for the first time. I own end-to-end UX execution: user flows, wireframes, prototypes, and the craft of getting from concept to a polished, production-ready interface. I design for AI-driven scenarios, specifically including an AI agent platform with trust and verification patterns built into the interaction model, and use AI tools daily to accelerate my own prototyping and synthesis. I don't just execute on a brief; I dig into the problem, form an opinion, and bring it to the team.

EXPERIENCE

UX Designer (Senior) · *Helson Software Solutions* · India May 2022 – May 2024
Enterprise B2B - workflow automation, CMS, DMS, CRM. 500+ daily users across six product releases.

- Drove end-to-end UX execution for three enterprise platforms by designing user flows, wireframes, high-fidelity prototypes, and production-ready interfaces and applying consistent design methods across every release.
- Identified and communicated problems independently rather than waiting to be told what to fix, dissected workflow friction through usability testing, formed an opinion on the cause, and brought a proposed fix to the team rather than just a diagnosis.
- Applied systems-level thinking to multi-step, multi-role enterprise workflows, designing for users navigating complex journeys with varying technical literacy, similar to SMBs encountering Google Ads for the first time.
- Managed UX priorities across three concurrent platforms and multiple engineering teams, coordinating daily to align on expectations, scope, and delivery timelines.
- Built and governed a design system with 80+ reusable components and design tokens, ensuring Google-style consistency held across five products as the team and platform scaled.
- Ran quarterly usability testing, cutting reported navigation friction by 35% by validating design decisions against observed behaviour rather than assumptions.
- Staying updated with the market trends and using them as a core part of my own design workflow for accelerating prototyping, synthesizing research findings, and exploring design directions faster than manual iteration alone.

UI/UX Designer (First Design Hire) · *Helson Software Solutions* · India Apr 2020 – May 2022
First design hire at the company - built UX as a function from the ground up.

- Joined as the company's first dedicated designer, independently establishing UX processes and design standards where none existed, comfortable operating without an established playbook.
- Designed user interfaces for the Document Management System (DMS) and Records Management System (RMS) modules, mapping end-to-end user flows for workflows with strict procedural requirements.
- Conducted the company's first usability testing and research sessions, using direct customer insight to shape early product direction rather than relying on assumptions.

Jr. UI/UX Designer · *Krr Infotech Pvt. Ltd.* · Hyderabad, India Dec 2018 – Mar 2020
Product team designing CRM platforms for sales and marketing companies.

- Designed user flows and wireframes for core CRM features, translating sales and marketing workflows into interfaces aimed at getting users to value as quickly as possible.
- Conducted competitive analysis and usability evaluations to inform incremental design improvements.

UX Design Intern · *Krr Infotech Pvt. Ltd.* · Hyderabad, India Jun 2018 – Dec 2018
First exposure to professional UX work, alongside the final year of my bachelor's degree.

- Supported wireframing and prototyping for CRM modules, and collaborated with developers to validate UI implementation within an Agile team structure.

SELECTED PROJECTS

FinPilot - AI Agent Platform for Enterprise Fintech - Designed an AI copilot platform for compliance officers, risk analysts, and traders with direct experience designing AI-driven, conversational interaction patterns. Built a trust layer into the interaction model with citations, confidence scores, reasoning traces, and audit logs. The primary case study is a compliance workflow redesigned from ~2h 15m to ~12 minutes, the kind of systems-level redesign this role calls for. [Case study →](#)

D.AI - Adaptive AI Interface - An AI interface that transforms its entire UI based on the user's profession. Research-led with 12 interviews across 6 domains before any design started. Built as a working React/JSX prototype with live Claude API calls, hands-on use of AI in the design and build process itself. [Case study →](#)

PaySafe - Payment Flow Redesign - Identified drop-off points in a multi-step payment flow through research and behavioural analysis, then redesigned the end-to-end flow for web and mobile, reducing the steps required to complete a transaction, the same friction-reduction thinking SMB acquisition flows depend on. [Case study →](#)

Enterprise Tech Landscape - UX Research Study - 19-page research deliverable analysing how design decisions and systems-level thinking scale across complex software platforms. Competitive analysis and design audits across six enterprise platforms. [Case study →](#)

SKILLS & TOOLS

Interaction Design: User Flows, Wireframing, High-Fidelity Prototyping, Mockups, Visual Design, Information Architecture, Design Systems, UX Writing, Heuristic Evaluation, Usability Testing, WCAG 2.1

AI-Driven Design: Conversational and agent-based UX, trust & verification patterns (citations, confidence scores, audit trails), AI-assisted design workflows

Systems & Cross-Functional: Systems-level thinking, complex product redesigns, managing priorities across engineering teams, cross-functional stakeholder alignment, Agile/Scrum

Tools: Figma, FigJam, Adobe XD, Framer, Miro, Jira

AI-Assisted Workflow: Claude, Cursor, Figma Make, ChatGPT, Lovable and more are used daily for prototyping, synthesis, and accelerating design exploration

Technical: HTML, CSS, React/JSX Prototyping

EDUCATION

MS — Technology Management (Computer Science Concentration)

Jan 2025 – Dec 2026

Avila University, Kansas City, MO · GPA: 3.83 · In Progress

Relevant coursework: System Analysis & Design, Enterprise Architecture, AI & Machine Learning, Cloud Computing

BS — Computer Science Management

Jun 2014 – Mar 2017

Nova Academy of Education & Research, Tamil Nadu, India

ADDITIONAL

Work Authorization: Authorized to work in the U.S. under F-1 OPT through 2030.

Portfolio: Full case studies, process documentation, and live prototypes at dheerajallu.art.

Currently Building: Agentic UX patterns, AI product design, enterprise AI tooling - actively prototyping and writing it about [@dheerajallu.art](https://dheerajallu.art)
